SOFTWARE ENGINEER

Versatile Software Engineer with experience building responsive end-to-end applications, secure payment workflows, and data-driven digital products. Proficient in modern JavaScript, TypeScript, and Node.js, alongside a solid foundation in PHP, Laravel, C#, and relational databases. Adept at managing the entire application lifecycle from designing intuitive client journeys and structuring interactive dashboards to integrating robust local fintech infrastructures like M-Pesa Daraja. Driven by clean code design, efficient problem-solving, and building high-impact tools that offer seamless user experiences.

CORE SKILLS

- **Languages & Frameworks:** JavaScript, TypeScript, Node.js, PHP (Laravel), C# (.NET, Blazor), HTML5, CSS3.
- **Fintech & Integrations:** M-Pesa Daraja API, REST APIs, JSON, Authentication & Session Systems.
- **Databases & Architecture:** PostgreSQL, MySQL, Core Architecture Design, Database Modeling, Data Integrity.
- **Tools & Platforms:** Git/GitHub, Docker, Linux Systems, Nginx, CI/CD Workflows.
- **Technical Support & Troubleshooting:** Incident Investigation, Root Cause Analysis, Application Debugging, User Support.

SELECTED PROJECTS

Veridian TMS – Property & Tenant Management System (PHP/MySQL)

- Architected a complete full-stack portal allowing property administrators to handle live tenancies, monitor financial ledgers, and view analytics dashboards.
- Engineered dynamic payment logic and automated workflows featuring real-time data calculations and instantaneous PDF receipt rendering.
- Implemented end-to-end M-Pesa Daraja API interactions (STK Push & network callback processing) to power automated, friction-free customer payment flows.

ManageMate – Workforce Management Platform

A role-based employee management system built with ASP.NET Core 9 and Blazor Server. ManageMate enables organizations to manage tasks, track work hours, schedule meetings, and monitor team performance through dedicated dashboards for Admins, Task Managers, and Employees.

Polloger - Police Occurrence Book (OB) System

Polloger is a lightweight, scalable web application designed to digitize police occurrence book (OB) logging. It allows police officers and administrative staff to log complaints, track case progress, manage evidence, and view analytics all within a realistic, secure environment. Built with Next.js, Supabase and Vercel.

EXPERIENCE

National Registration Bureau – Industrial Attachment (May 2025 - Aug 2025)

- Supported secure digital records management systems and verified transactional data integrity within an enterprise-scale operational setting.
- Diagnosed and resolved system issues, provided technical support to end users, investigated application and database-related incidents, and collaborated with engineering teams to implement fixes and system improvements..

EDUCATION

- **Bachelor of Science in Computer Science** – The Catholic University of Eastern Africa (CUEA)
- **KCSE Mean Grade A-** – Mangu High School
